Computer Science — DSA: Arrays & Complexity

Quick offline notes (study-ready formulae + key ideas):

Array indexing: O(1) random access
Binary search: O(log n) when array is sorted
Prefix sums turn range queries into O(1) each
Complexity counts operations, not wall-clock time
Space tradeoff: extra memory for faster queries
Practice pattern: sort + scan

Tip: open the PDF and try 3 practice questions from your course notes.
