Computer Science — Operating Systems

Quick offline notes (study-ready formulae + key ideas):

OS roles: process, memory, files, scheduling
Process vs thread: thread shares memory within a process
System calls are the 'API' to request OS services
Deadlock condition set: mutual exclusion, hold & wait, no preemption, circular wait
Avoid deadlock: resource ordering, timeouts, detection
Paging supports virtual memory with frames/pages

Tip: open the PDF and try 3 practice questions from your course notes.
